## RO 3000 MP

### Installationsguide.

The Check Valve closes the water line to prevent backflow after Bladder Tank is full.

The Auto Shut-Off assists the Check Valve in preventing backflow while also regulating your good and bad water.

The Manual Flush Valve releases pressure on the R.O. Membrane

The Low-Pressure Switch kicks on when Bladder Tank is empty to start flow.  
The High-Pressure Switch kicks on when Bladder Tank is full to stop flow.

Flow Restrictor determines the amount of water that flows to your drain.
